## Take the Right Steps to Prevent Falls

If you take care of your overall health, you may be able to lower your chances of falling. Most of the time, falls and accidents don't "just happen." Here are a few tips to help you avoid falls and broken bones:

- **Stay physically active.** Plan an exercise program that is right for you. Regular exercise improves muscles and makes you stronger. It also helps keep your joints, tendons, and ligaments flexible.
- **Have your eyes and hearing tested.** Even small changes in sight and hearing may cause you to fall. When you get new eyeglasses or contact lenses, take time to get used to them. If you have a hearing aid, be sure it fits well and wear it.
- **Find out about the side effects of any medicine you take.** If a drug makes you sleepy or dizzy, tell your doctor or pharmacist.
- **Get enough sleep.** If you are sleepy, you are more likely to fall.
- **Stand up slowly.** Getting up too quickly can cause your blood pressure to drop. That can make you feel wobbly. Get your blood pressure checked when lying and standing.
- **Use an assistive device if you need help feeling steady when you walk.** Appropriate use of canes and walkers can prevent falls.
- **Wear non-skid, rubber-soled, low-heeled shoes, or lace-up shoes with non-skid soles that fully support your feet.** Don't walk on stairs or floors in socks or in shoes and slippers with smooth soles.
- **Always tell your doctor if you have fallen since your last checkup, even if you aren't hurt when you fall.** A fall can alert your doctor to a new medical problem or problems with your medications or eyesight that can be corrected. Your doctor may suggest physical therapy, a walking aid, or other steps to help prevent future falls.

### What to Do If You Fall

- If you do fall, stay as calm as possible.
- Take several deep breaths to try to relax. Remain still on the floor or ground for a few moments. This will help you get over the shock of falling.
- Decide if you are hurt before getting up. Getting up too quickly or in the wrong way could make an injury worse.
- If you think you can get up safely without help, roll over onto your side. Rest again while your body and blood pressure adjust. Slowly get up on your hands and knees, and crawl to a sturdy chair.
- Put your hands on the chair seat and slide one foot forward so that it is flat on the floor. Keep the other leg bent so the knee is on the floor. From this kneeling position, slowly rise and turn your body to sit in the chair.
- If you are hurt or cannot get up on your own, ask someone for help or call 911. If you are alone, try to get into a comfortable position and wait for help to arrive.
